EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. On line 1 of Claim 5, the word "base" has been deleted and replaced with the phrase "the base".
3. On line 1 of Claim 11, the phrase "the outer member" has been deleted and replaced with the phrase "the signal member" in order to correct a potential lack of antecedent basis problem.
4. On line 4 of Claim 14, the phrase "the first and second members" has been deleted and replaced with the phrase "the liquid and expandable members".

Reasons for Allowance

5. Claims 1-22 are allowed.
6. The following is an examiner's statement of reasons for allowance. The self-erecting and debris collecting device as claimed is not shown or suggested in the prior art because of the use of a device that is comprised of a base member that is configured to rest on a surface, a gas generating member, an inflatable member that is in fluid communication with said gas generating member, and a signal member that is

Art Unit: 3617

erected by said inflatable member, where said signal member is arranged to provide a receptacle for debris.

7. The prior art as disclosed by Liebermann (US 4,929,214) shows the use of a self-erecting device that is comprised of a base member that is constructed to rest on a surface, a gas generating member, and an inflatable balloon member that is in fluid communication with said gas generating member, which is further comprised of a first sachet containing one or more gas generating powders, and a second sachet containing water. Weig (US 2,808,803) discloses a portable inflatable device that is comprised of a base member, an inflatable member, and a signal member with warning indicia that is connected to said inflatable member. Hodgdon et al. (US 5,316,060), Blackaby et al. (US 5,149,028) and Simpson (US 4,884,603) disclose refuse collectors with solid support frames for holding open a bag in order to facilitate loading of said bag with refuse. However, none of the prior art cited shows or suggests the use of a self-erecting and debris collecting device that is comprised of a base member that is configured to rest on a surface, a gas generating member, an inflatable member that is in fluid communication with said gas generating member, and a signal member that is erected by said inflatable member, where said signal member is arranged to provide a receptacle for debris.

Conclusion

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
